[linkedin.com/in/asherbennett1](https://www.linkedin.com/in/asherbennett1)

Mechanical Engineering undergraduate with hands-on experience in CAD modeling, hardware prototyping, and interdisciplinary team collaboration.

Education

Bachelor's degree in Mechanical Engineering, University of Massachusetts Amherst at Amherst, MA

3.8/4.0 GPA, Awarded membership of the dean's list (Fall 2024)

expected in June 2028

Relevant coursework: Thermodynamics, Materials Science, Statics, Strength of Materials

Work Experience

Information Technology Lead

Natick Public Schools, Natick, MA

April 2024 - September 2024

- Led a team of 5 in desktop/laptop/tablet diagnosis, repair, and turnaround for >2000 students enrolled in schools around Natick, Massachusetts. Gained valuable experience in hardware diagnosis, project management and team coordination.

Operations Team Member

Chipotle Mexican Grill, Natick, MA

May 2022 - September 2022

- Delivered superior customer service and collaborated with team members in a fast-paced setting to manage >\$10000 in sales per day.

Crew Member - Perishables Organization and Distribution

Manzanita Outreach, Sedona, AZ

September 2020 - May 2022

- Collaborated with team members to efficiently organize and pack >250 pounds of components per day per distribution.

Extracurricular Experience & Projects

UMass Rocketry - Designed, prototyped, and optimized multiple components of the primary payload's mechanical systems using SOLIDWORKS and Orca/Creality Slicer in a fast-paced, collaborative environment. Analyzed, diagnosed, and fixed multiple components on both the rocket and assembly hardware, including 3D printers, computers, and tools. Helped achieve a top 10 national placement at NASA Student Launch.

ICARUS - Designed, built, and tested an autonomous RC plane using a SpeedyBee F405 Wing and ardupilot telemetry software with the intent of testing a foamboard frame with a 3D-printed enclosure as a way to test my experience in design. Gained valuable experience in airplane design and electronics assembly/communication.

IVALDI - Current personal project. Designing a highly articulated humanoid robotic hand to explore complex tendon-driven actuation and bio-inspired dexterity. Developing the integrated skeletal geometry and sensor-feedback arrays to simulate human grasping, tactile sensitivity, and fine motor control, focusing on high-fidelity mechanical replication and adaptive grip dynamics.

Skills

- Mechanical Design & Evaluation:** Proficient in SOLIDWORKS, MATLAB, Slicers, & C++
- Project Management, Collaboration, & Communication:** Working with talented graduate and undergraduate students to successfully design, build, and deliver a competition rocket approved by NASA.
