EDUCATION

Bachelor of Science in Mechanical Engineering

Expected June 2028

University of Massachusetts Amherst | GPA: 3.8/4.0 | Dean's List (Fall 2024)

Relevant Coursework: Thermodynamics, Design of Mechanical Components, Manufacturing Processes, Dynamics, Fluid Mechanics*, Modeling & Analysis of Dynamic Systems*, Heat Transfer*

* Upcoming coursework

ENGINEERING PROJECTS

UMass Rocketry — Mechanical Payload Lead

Sept 2024 - 2026

- Mechanical design for the payload subsystem across two NASA Student Launch competition cycles, delivering flight-ready assemblies under strict mass, volume, and G-force constraints.
- Designed protective housings for PCBs, sensors, and wiring harnesses through iterative CAD-to-print cycles in SOLIDWORKS and FDM 3D printing, optimizing for vibration isolation, impact protection, and field-removable access.
- Engineered a post-landing soil excavation mechanism with an actuated nose cone, sealed sample environment, and integrated pH/chemical composition testing capability.
- Contributed to a top-10 national placement out of 70+ university teams at NASA Student Launch.

ICARUS — Autonomous RC Aircraft

May 2023 - Oct 2023

- Designed, built, and flight-tested an autonomous GPS-waypoint-navigating aircraft from scratch, including airframe design (foamboard construction, weight/balance optimization) and a 3D-printed avionics enclosure.
- Soldered and flashed firmware onto a SpeedyBee F405 Wing flight controller; wired all electronic subsystems including voltage regulation, overcurrent protection, and GPS integration with ArduPilot/iNav for autonomous flight.

IVALDI — Humanoid Robotic Hand

In Progress

- Developing a tendon-driven, bio-inspired robotic hand in SOLIDWORKS exploring multi-DOF finger articulation and adaptive grip force control. Currently in the skeletal geometry design phase with initial CAD models completed.

Poly95 — Real-Time Probabilistic Decision Engine

In Progress

- Built a real-time decision engine in Rust that ingests live WebSocket data feeds, computes probabilistic fair-value estimates via CDF modeling, and executes automated actions under sub-second time constraints.

WORK EXPERIENCE

Information Technology Lead

April 2024 - Oct 2025

Natick Public Schools, Natick, MA

- Led a team of 5 technicians in diagnosis, repair, and turnaround of 2,000+ student devices (desktops, laptops, tablets) across the district.
- Developed hardware troubleshooting workflows that reduced average device turnaround time by ~1h and improved team throughput.

Operations Team Member

May 2022 - Sept 2022

Chipotle Mexican Grill, Natick, MA

Crew Member — Perishables Organization & Distribution

Sept 2020 - May 2022

Manzanita Outreach, Sedona, AZ

AWARDS & HONORS

- Dean's List, University of Massachusetts Amherst — Fall 2024
- Top-10 National Placement (70+ teams), NASA Student Launch Competition — UMass Rocketry

TECHNICAL SKILLS

CAD & Prototyping: SOLIDWORKS, 3D printing (FDM, multiple materials), Orca/Creality Slicer, rapid prototyping & iteration

Software: Rust, Python, MATLAB, C++, embedded systems (ArduPilot, SpeedyBee)

Manufacturing: GD&T, additive manufacturing, manual machining, electronics soldering & assembly

Hardware: Desktop/laptop diagnosis & repair, embedded electronics, sensor integration
